When the processing is likely to entail a high risk to the rights and freedoms of individuals, a data protection impact assessment must be carried out.

The tool guides you step-by-step through the process of preparing an impact assessment:

- Systematic description of the processing

- Assessment of the necessity and proportionality of processing

- Identification of associated risks

- Risk assessment

- Security controls implemented

- Obtaining the residual risk

- Generation of the self-report

This application will guide you through the process step by step.

Download it from the APDCAT website!

Compatible with Windows, Linux and Mac.

This is an application that is installed locally and does not require an Internet connection. No data is sent or stored outside your system. In this way, it does not increase security risks in the place where it is installed and thus complies with the National Security Scheme (RD 311/2022).
